Interoperability for Audit/Ledger Transactions

5

Tracking Changes in JDE

Have you ever been curious about what exactly a Master Business Function is and how they are used in JDE? And what about the role of ‘Z Files’ in populating interoperability tables for tracking audit changes? It’s all here, and more, in easy to understand speak.

Unlocking the Mystery of Unapplied Receipts

18

Take the Detective Work Out of the Data Flow

Ahh yes, unapplied receipts! There is an amazing amount of data involved in something that sounds so straightforward. Understanding not only the flow but the tables that are affected every step of the way is critical. Michelle does a great job of laying it out for us.

Calculating Safety Stock Automatically

25

There’s a UBE for that!

Discover the new functionality in Release 24 (9.2.8.x) for maintaining safety stock levels. This article guides you through the setup process and explains the background calculations, helping you decide which of the three scenarios to use. What a great enhancement to E1!

Object Promote to Package with Web OMW

Wait, a fat client is no longer required for package builds?! New with Release 24, the introduction of Web OMW’s “Project Promote” offers a substantial improvement by eliminating a traditionally lengthy process, reducing the risk of downtime, and enhancing end user stability.

Technical/Orchestrator

Lisa Tran

Using an Orchestration to Process .CSV Files

56

Part 1: A Real-World Example for Work Order Entry

Here’s another excellent real-world use case for utilizing Orchestrator: importing .csv files and processing them to automatically create entries in E1. The end solution showcases numerous examples of the capabilities of Orchestrator and E1.
