

I would like to give a special shout-out to all the newcomers joining the JD Edwards community! Welcome 'Newbies'!!

Due to the current scarcity of JD Edwards experience in the job market, organizations are prioritizing the recruitment of individuals to those who are enthusiastic about learning and advancing within their respective roles (as opposed to those with JDE experience). Ensure that your 'Newbies' receive proper training by engaging JD Edwards specialists who have accumulated years of valuable experience to share, such as our team at JDEtips!

And what an exciting time to become part of the JD Edwards community. The EnterpriseOne ERP software has never been more robust and exciting to work with. Oracle's 2024 release, EnterpriseOne Release 24 (aka Tools 9.2.8.X), introduces numerous enhancements, not just with UDOs (including Orchestrator) but also across various application suites. Even those of us who have been in this space for 20+ years continue to discover and adapt to new functionalities. I like to think it's keeping us young!

Ensure that your new hires get a fantastic kick-start to understanding EnterpriseOne by joining us at JDEtips University <https://www.jdetips.com/JD-Edwards-Training/>. We provide public classes if you have one or two new hires and private classes for larger groups. Our team is dedicated to supporting you!

And to the 'Newbies' themselves, you have chosen an extremely exciting and rewarding career by joining the JD Edwards community! Welcome!!

Cheers!

Penny Allen, President and CEO
